ACCESS TO VET

With Competence Development and Skills Recognition

About the Project

The project entitled "ACCESS TO VET - with Competence Development and Skills Recognition" has been implemented between 01.09.2017 and 30.08.2019 in international partnership of six members representing 5 countries (Hungary, Ireland, Italy, Spain, Romania) with support of the programme ERASMUS+ of the European Commission.

Our common goal

- transversal competence development essential for employment and learning, as well as
- in the field of recognition of prior learning

mutual learning about best practices applied by the international partners and further development of our partner organizations' professional activities through the exchange of experiences.

The ultimate goal was to incorporate the learnt best practices considered adaptable into the operation of our organizations and, as necessary by possible amendments further improve the standards of our professional work.

The project was primarily aimed for the professional development of our partner organizations' professionals responsible for career orientation, career counselling, vocational training, adult education and the design of employment policy.

Project implementing professionals

Main results of the Project:

- Best practices applied by the partner organizations for improving access to training and qualifications, and related experiences and results are presented in a publication.

- During the implementation of the project particular attention has been paid to impact measurement.

In the project each partner organization chose one of the presented best practices that they also tested. A Summery Report has been conducted presenting the experiences of the incorporation of best practices learnt in the framework of the project into the operation of the partner organizations.

These documents are available at <http://bekes.munka.hu> under "Nemzetközi projektek".

The published results of the project are recommended for any organizations or professionals that are responsible for the subject area of the project, and best practices and the results of their testing may support professional activities in any EU Member States.
